

GitHub Pages + PHP Issue

Your code uses PHP and MySQL: `require_once 'config.php'; getConnection();` PDO query on submissions table. GitHub Pages does not execute PHP. It only hosts static HTML, CSS, and JavaScript. Therefore this code will not work on GitHub Pages.

To run this project you need: PHP Server MySQL Database `config.php` submissions table Free hosting options: InfinityFree 000WebHost AwardSpace Render (with PHP setup) Railway (with PHP setup) If you want to stay on GitHub Pages, replace the PHP backend with Firebase or another backend API.
